Software development experience: 3 years +/-

I have encountered project successes and failures, great teams and not so great teams. Ultimately I strive to provide value to projects I get involved in. My main expertise is predominantly backend PHP development.

I'm a passionate, driven, adaptable and experimental individual who enjoys attending relevant user groups and listening to podcasts in my spare time.

Experience:

November 2015 - March 2017

Just Develop It - permanent

Exposure to distributed computing, critical infrastructure and working within a large team. Maintenance of web application with legacy code base as well as new development utilizing an internal framework.

PHP, Phalcon, Message queueing

January 2015 - October 2015

Dedoko - permanent

Development and maintenance of enterprise web applications. Working closely with the project lead to achieve tight deadlines. Significant attention put towards having an eye for detail and consideration for the end user of the applications.

PHP, CodeIgnitor, MySQL, Javascript, jQuery, D3

July 2014 - December 2014

Freelance / Self education

I took interest in the Android platform and developed a basic mobile application.

Android, Java

October 2013 - July 2014**Claromentis - permanent**

Maintenance of web application with legacy code base. Significant attention towards backwards compatibility to maintain product stability to ease application upgrades. New development was undertaken on small modules.

PHP, MySQL, jQuery

July 2012 - Present**Freelance**

Since starting my freelance career path I've been involved in a broad range of projects - mostly part time. Most significantly I feel it gives me insight into the broad ecosystem of how software is used by various individuals or businesses.

PHP, Wordpress, Python, CodeIgniter, Laravel, API integration, server administration, devops
